

HYDERABAD · ONE PINCODE AT A TIME

SAAHAA

Workflows, earnings, and where the money is saved.

Every service and every shop in your neighbourhood, in one app. The professional keeps 100% of what they quote. The customer still pays less than a commission app. This deck shows how both of those are true at the same time.

THE WHOLE IDEA, IN ONE LINE

A commission app takes a quarter of a worker's pay. We add our charge **on top** instead.

100%

THE PRO KEEPS

Of the price they quoted. Not 75%. There is no commission to deduct, because our charge is never inside their money.

8%

ADDED ON TOP

Paid by the customer, shown before they book. 6% once a pro is SAAHAA Certified.

3%

A SHOP PAYS

Of the basket, capped at ₹25 an order, and free for their first 30 orders.

₹0

TO JOIN, EVER

No listing fee, no monthly plan, no lead credits, no charge for a job you did not win.

All four figures are read live from the pricing engine, never typed into a screen. The owner can change them; a booked order keeps the numbers it was booked with.

WORKFLOW ONE

The customer, from a problem to a paid job

Seven steps. The whole path is shown on the first screen, so nobody wonders how many more there are.

Cancel before the pro sets out and it is a full refund. Every rule on screen is read from the engine, so what you are told is what the code does.

WORKFLOW TWO

The professional, from a phone to a paid week

Sign-up is seven steps and about eleven minutes. Nobody has to approve him to start working.

1 Your number Confirm it, and collect your permanent SAAHAA code. Nothing is texted — this product never sends codes. 1 MIN	2 Your ID Aadhaar, PAN or licence. Only a scrambled fingerprint and the last four digits are kept. 2 MIN	3 One photo For verification, and it stays private. The face on your public page is one you choose. 1 MIN	4 Five trade questions Real ones about your own trade. Four out of five passes. 3 MIN	5 How it works Six questions that teach rather than reject — the code at the door, never cash outside, the photo. 2 MIN	6 Where to pay you Your UPI id. This is the only place your money goes. 1 MIN	7 You are live A public page with your name on it, built and kept current by SAAHAA. You maintain nothing. ₹0 PAID
---	--	---	---	---	---	--

Then every job: accept → travel → type the customer's code at the door → photograph the work → get paid. The stake locked at check-in comes back in full the moment the customer confirms.

The same job, from both sides at once

THE MOMENT	WHAT THE CUSTOMER SEES	WHAT THE PROFESSIONAL SEES
Booked	A named pro, a locked price, an arrival time.	A job with the address, the distance and exactly what he will be paid.
On the way	A live map, and how many minutes away he is.	The same map, without the controls. He is travelling to a place, not a word.
At the door	“Read your code out to your pro.” Her own SAAHAA code, the same every job.	“Ask the customer for their SAAHAA code.” Typing it starts the job and locks his stake — stated <i>before</i> he types.
Working	The job is running. Her money is held, not paid.	His stake is locked. Extra work needs her approval before he does it.
Finished	A photograph of the work, before and after.	He must photograph it. There is no path to payment without it.
Paid	She releases the money. She sees the fee and the GST, itemised.	He receives 100% of his quote, and his stake back in full, at once.
If it went wrong	Full or partial refund. His stake is forfeit to her, never to SAAHAA.	He can answer the dispute. The owner decides, and every decision is on the record.

The contact details each side sees are masked in chat, and a phone number written any way a person writes it is caught. The pro keeps an invoice record of past customers — that is stated on the privacy page rather than hidden.

The shop, from a shelf to a delivery

Opening the shop

- **Tap items from a ready-made list.** ~180 real Hyderabad SKUs with real prices — about six seconds each, no typing.
- **Add a photo, a name, a price.** Anyone can list what they actually sell.
- **MRP is enforced.** The app refuses to list above it, so a shop cannot quietly overcharge.
- **Open or closed is one switch.** Closed means no orders can reach you — not a queue of angry customers.

Taking an order

- **Accept, pack, weigh.** The screen shows what the customer paid *and* what you keep.
- **Something out of stock?** Offer a similar item, refund that line, or ask her — she has 90 seconds, then it refunds automatically.
- **Delivery or pickup.** Pickup shows the customer's code at the counter.
- **3% from your side**, capped at ₹25 — and your first 30 orders are free of it entirely.

WHERE EVERY RUPEE GOES

A ₹1,000 job, itemised

ON SAAHAA	AMOUNT
The professional's quote	₹1,000
SAAHAA's charge (8%, on top)	₹80
— platform fee	₹68
— GST, remitted not kept	₹12
The customer pays	₹1,080
The professional keeps	₹1,000

A TYPICAL COMMISSION APP	AMOUNT
Price set by the app	₹1,333
Commission taken from the worker (25%)	-₹333
Convenience fee added to the customer	₹99
The customer pays	₹1,432
The professional keeps	₹736

The customer pays ₹352 less and the professional takes home ₹264 more — on the very same job. Both, because the quarter that used to disappear was never work anybody did.

SAAHAA's whole share of this job is ₹80, and ₹12 of that is GST, remitted rather than kept.

THE SAME ARITHMETIC, AT THREE SIZES

It does not stop working on a small job

THE PRO QUOTES	PRO KEEPS	CUSTOMER PAYS	A COMMISSION APP	CUSTOMER SAVES	PRO GAINS
₹500 — a tap washer, a fan	₹500	₹540	₹766	₹226 · 29%	₹169
₹1,000 — a geyser, a deep clean	₹1,000	₹1,080	₹1,432	₹352 · 25%	₹264
₹2,500 — a full rewire, a move	₹2,500	₹2,700	₹3,432	₹732 · 21%	₹549
Once a pro is SAAHAA Certified	100%	+6% only	—	More again	Unchanged

A commission app is modelled at 25% plus a ₹99 convenience fee, with the pro taking home the same amount — the standard shape in this market. These rows are printed by the pricing engine itself (compareWithApps), not typed by hand.

₹0

COST TO LIST

For a pro or a shop, for ever.

₹0

PER LEAD

You are never charged for a job you did not win.

₹0

MONTHLY

No plan, no tier to buy, no visibility to rent.

₹0

TO THE CUSTOMER

Browsing, searching and asking for rates are all free.

What the app can do for the people who work

A professional

- **Keep the whole quote.** Roughly ₹264 more per ₹1,000 job than a commission app — about **₹5,300 a month** on twenty jobs.
- **Get found without advertising.** A public page, built and kept current from your work. Share the link on WhatsApp — it is your professional card.
- **Win work by being trusted, not cheapest.** Sealed rates are scored on trust and distance as much as price.
- **Climb and pay less.** SAAHAA Certified drops the customer's charge from 8% to 6%, which makes you the better-priced pro without cutting your own rate.
- **Be paid on the day.** Money released to your UPI when the customer confirms — no thirty-day terms.
- **Repeat customers, on the record.** "Book again" puts you one tap away for anyone you have worked for.

A shop

- **Open in an evening.** Tap items from a ready list; a storefront is live the same day.
- **First 30 orders free.** Then 3%, capped at ₹25 — a ₹2,000 basket costs ₹25, not ₹60.
- **Delivery without hiring anybody.** A visible per-distance fee, ₹5 of which is dispatch and the rest the rider's.
- **Sell what the aggregators will not list.** Your own products, your own photos, your own prices under MRP.
- **No dark-store competing with you.** The platform does not hold stock, so it is never your rival.

Both

- **One number, two accounts.** Trade as a pro and buy as a customer — separate wallets, separate histories, one phone.

What the app can do for the people who buy

On a service

- than the same job on a commission app, because there is no quarter to fund.
- without losing the one you have — your booking stays held while you ask, so asking costs nothing.
- and cannot rise. Extra work needs your say-so.
- , where the category carries one.
- if you cancel before the pro sets out.

On a shop order

- The app refuses to list an item above it.
- , shown as its own line — ₹19 up to 2 km, not a mystery fee.
- , not theirs: a similar item, a refund, or ask me.
- , on a grocery order as much as a plumber.
- , so the margin stays in the neighbourhood.

Trust is mechanical here, not a promise

01

Verified, in seven steps

Number, ID (hash and last four only), photo, a trade quiz, a conduct quiz, UPI, agreement. The owner approves nothing below tier 3.

02

Money held by SAAHAA

Never paid to the pro directly, and never released until the customer confirms the work.

03

A code at the door

The customer's own, so nobody can claim a visit that did not happen. Nothing is ever texted, so nothing can be phished.

04

A photo before payout

There is no path to being paid that skips the evidence.

05

The worker has skin in it

A stake locks at check-in and returns in full on confirmation — forfeit to the customer, never to SAAHAA, if a dispute is upheld.

06

A ledger that reconciles

Double-entry and hash-chained. It sums to zero or the release does not ship.

07

Your data, and a way out

Remove your own account and see exactly what goes, what is kept, and why, before it happens.

08

Open source

The pricing engine and the legal pages are public. You can check the app does what these pages say.

WHAT THIS IS NOT, YET

The limits, stated before anyone asks

- **A neighbourhood app, by design.** Everything lives on one device today. Measured: one pincode is comfortable, a ward fits, a suburb needs a desktop. Past that the answer is the server, not a bigger phone.
- **Payments run in sandbox** until the gateway is switched on, and every screen that moves money says so.
- **No SMS, deliberately.** Removed from the plan, not deferred — which is why SAAHAA never sends you a code, and anyone claiming otherwise is not us.

- **Client-side auth is UI, not authorization.** Written down in the security document rather than glossed over. Real money needs the server-side rails, and those are built and waiting.
- **A device that fills up says so.** Loudly, at the top of every screen, and it cannot be dismissed — because silently failing to save would be worse than crashing.
- **One owner, one city.** Ten pros, three shops, fifty households, then the next pincode.

ONE CIRCLE. ONE PURPOSE.

The quarter that used to disappear was never work anybody did.

So we stopped taking it. The professional keeps everything they quote, the customer still pays a fifth to a quarter less than a commission app, and the difference stays in the neighbourhood that produced it.
